Executive Summary

Public Building Commission (PBC) of Chicago contracted with AECOM Technical Services, Inc. (AECOM) to perform a Phase I Environmental Site Assessment (ESA) of the Palmer Elementary School located at 5051 North Kenneth Avenue, Chicago, Cook County, Illinois (subject property). This Phase I ESA was performed in general conformance with the scope and limitations of ASTM Standard Practice Designation E 1527-13 for ESAs. Exceptions to, or deletions from, this practice are described in this report.

The site visit occurred on October 25, 2018. The approximately 4.28-acre subject property is occupied by a two-story, approximately 85,000 square-foot Main Building with a basement (built in 1925), a single-story approximately 10,000 square-foot Heating Plant Building with an underground tunnel that connects to the Main Building's basement (built in 1925), a single-story approximately 10,000 square-foot Annex Building (built in the 1990s), and a single-story approximately 10,000 square-foot Modular Building (built in the 1990s). Additionally, four storage units are present at the subject property (one contains miscellaneous storage for Palmer Elementary and the other three are construction contractor storage). No visual evidence of underground storage tanks (USTs) (e.g., vent pipes, fill ports), potable water wells, monitoring wells, clarifiers, dry wells, septic tanks, or leach fields was observed during the site visit.

The subject property is located in a residential area within the City of Chicago. The subject property is bordered to the north by West Carmen Avenue, beyond which are residential properties. The subject property is bordered to the east by North Kostner Avenue, beyond which are residential properties. The subject property is bordered to the south by West Argyle Street, beyond which are residential properties. The subject property is bordered to the west by North Kenneth Avenue, beyond which are residential properties. Gasoline service stations and dry cleaners were not observed in the immediate vicinity (approximately 500 feet) of the subject property. Other off-site sources of concern were not identified in the immediate vicinity.

AECOM's historical research indicates that the subject property was vacant land from by least 1889 through at least 1901 according to topographic maps. The 1924 Sanborn Map depicts the subject property as developed with six residences located along the eastern subject property boundary. According to the site contact, assessor's records, and Sanborn Maps, the present-day Main Building and Heating Plant Building were constructed in 1925. This is consistent with the 1928/29 topographic maps, which depicts these buildings on the northern portion of the subject property. The 1940 through 1993 Sanborn Maps depict the subject property occupied by the "John M. Palmer Public School" with the Main Building on the northwestern portion of the property and an underground tunnel leading to the smaller Heating Plant Building to the east. The Heating Plan Building is divided into multiple segments with the top segment labeled as "Coal," the bottom segment labeled as "Heating Plant," and a small central segment labeled "Scales." By the time of the 2002 Sanborn Map, a playground is depicted on the southwestern portion of the property and the present-day Annex Building is depicted on the southeastern portion of the subject property. By the time of the 2004 Sanborn Map, the present-day Modular Building is depicted on the southwestern portion of the property. The subject property has remained in the same configuration since that time. The subject property has been utilized as an elementary school since approximately 1925. Historic on-site concerns were identified and discussed below. Historic off-site concerns were not identified.

The subject property is identified on the Facility Index System (FINDS), Enforcement and Compliance History Online (ECHO), Resource Conservation and Recovery Act-Small Quantity Generator (RCRA-SQG), Aerometric Information Retrieval System (AIRS), Bureau of Land (BOL), Chicago Environment (IL CHICAGO ENV), and Chicago Department of Public Health Tank Asset Database (TANKS) environmental databases reviewed for this assessment. The FINDS, ECHO, RCRA, AIRS, and BOL database listings are compliance-related listings and are not considered a significant concern. The IL CHICAGO ENV database includes data from the Chicago Department of Public Health (CDPH) environmental records. This listing references the site address with no other pertinent information listed. The TANKS database listing refers to one 132-gallon diesel aboveground storage tank (AST) that was installed on March 6, 2007 outside the school's boiler room and is electrically grounded to the generator. The listing also states

that the diesel AST vents to the outside air. These database listings are not considered to represent a recognized environmental condition (REC) with respect to the subject property, in AECOM's opinion.

A number of surrounding sites were identified in the environmental database search report. Based on AECOM's review and analysis of the database listings, none of the surrounding sites are expected to present a REC to the subject property, based on their distance (generally greater than 500 feet), regulatory status (i.e. regulatory closure, no violations found), media impacted (soil only), and/or topographical position relative to the subject property (i.e. down-gradient or cross-gradient).

Based on the above-described activities, no RECs, controlled RECs (CRECs) or historical RECs (HRECs) were identified in connection with the subject property. However, the following de minimis condition (DMC) was identified during the assessment:

- AECOM observed de minimis oil staining on the concrete extending approximately two to three inches outward from an electrical transformer located to the east of the Heating Plant Building. This pad-mounted transformer contained a non-PCB sticker.

1. Introduction

1.1 Purpose

This Phase I Environmental Site Assessment (ESA) was performed pursuant to AECOM Technical Services, Inc. (AECOM's) written proposal, dated September 20, 2018. This assessment was performed in advance of the potential leasing of the subject property. The purpose of this Phase I ESA is to provide the client with information for use in evaluating recognized environmental conditions (RECs) associated with the subject property.

Per the ASTM standard, potential findings can include RECs, including historical RECs (HRECs), controlled RECs (CRECs), and de minimis conditions (DMCs). A REC is defined by the ASTM standard as "the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment." The term includes hazardous substances or petroleum products even under conditions in compliance with laws. HRECs are a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls. CRECs are a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls. DMCs are those situations that do not present a material risk of harm to public health or the environment and generally would not be subject to enforcement action if brought to the attention of the regulating authority.

This assessment is based on a review of existing conditions, reported pre-existing conditions, and observed operations at the subject property and adjacent properties.

1.2 Scope of Work

The Phase I ESA included a site visit, regulatory research, historical review, and a review and an environmental database analysis of the subject property. In conducting the Phase I ESA, AECOM assessed the subject property for visible signs of possible contamination, researched public records for the subject property and adjacent properties (as applicable), and conducted interviews with persons knowledgeable about the subject property.

This project was performed in general accordance with ASTM Standard Practice Designation E 1527-13 and AECOM's proposal, dated September 20, 2018. Conclusions reached in this report are based upon the assessment performed and are subject to limitations set forth in Sections 1.3, 1.4, and 1.5 below.

1.3 Study Limitations

This report describes the results of AECOM's Phase I ESA to identify the presence of conditions materially affecting the subject facility and/or property within the limits of the established scope of work as described in our proposal.

As with any due diligence assessment, there is a certain degree of dependence upon oral information provided by facility or site representatives, which is not readily verifiable through visual observations or supported by any available written documentation. AECOM shall not be held responsible for conditions or consequences arising from relevant facts that were concealed, withheld, or not fully disclosed by facility or site representatives at the time this assessment was performed. In addition, the findings and opinions expressed in this report are subject to certain conditions and assumptions, which are noted in the report. Any party reviewing the findings of the report must carefully review and consider all such conditions and assumptions.

This report and all field data and notes were gathered and/or prepared by AECOM in accordance with the agreed upon scope of work and generally accepted engineering and scientific practice in effect at the time of AECOM's assessment of the subject property. The statements, findings and opinions contained in this report are only intended to give approximations of the environmental conditions at the subject property.

As specified in the ASTM standard (referred to below as "this practice"), it is incumbent that the client and any other parties who review and rely upon this report understand the following inherent conditions surrounding any Phase I ESA:

- Uncertainty Not Eliminated - No ESA can wholly eliminate uncertainty regarding the potential for RECs in connection with a property. Performance of this practice is intended to reduce, but not eliminate, uncertainty regarding the potential for RECs in connection with a property, and this practice recognizes reasonable limits of time and costs. (Section 4.5.1 of the ASTM standard)
- Not Exhaustive - "All appropriate inquiry" does not mean an exhaustive assessment of a clean property. There is a point at which the cost of information obtained outweighs the usefulness of the information and, in fact, may be a material detriment to the orderly completion of transactions. One of the purposes of this practice is to identify a balance between the competing goals of limiting the costs and time demands inherent in performing an ESA and the reduction of uncertainty about unknown conditions resulting from additional information. (Section 4.5.2 of the ASTM Standard)
- Comparison with Subsequent Inquiry - ESAs must be evaluated based on the reasonableness of judgments made at the time and under the circumstances in which they were made. Subsequent ESAs should not be considered valid standards to judge the appropriateness of any prior assessment based on hindsight, new information, use of developing technology or analytical techniques, or other factors. (Section 4.5.4 of the ASTM Standard)

A similar set of inherent limitations exist in cases where the Phase I ESA included a screening-level assessment of vapor migration or vapor encroachment; such an assessment is a required part of a Phase I ESA when the ASTM E1527-13 standard is employed. According to the ASTM E2600-15 Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions, the following limitations apply:

- Uncertainty Not Eliminated in Screening - No vapor encroachment screen (VES) can wholly eliminate uncertainty regarding the identifications of vapor encroachment conditions (VECs) in connection with the target property. (Section 4.5.1)
- Not Exhaustive - The guide is not meant to be an exhaustive screening. There is a point at which the cost of information obtained outweighs the usefulness of the information and, in fact, may be a material detriment to the orderly completion of real estate transactions. One of the purposes of this guide is to identify a balance between the competing goals of limiting the costs and time demands inherent in performing a VES and the reduction of uncertainty about unknown conditions resulting from additional information. (Section 4.5.2)
- Comparison with Subsequent Investigations - It should not be concluded or assumed that an investigation was not adequate because the investigation did not identify any VECs in connection with a property. The VES must be evaluated based on the reasonableness of judgments made at the time and under the circumstances in which they were made. Subsequent VESs should not be considered valid bases to judge the appropriateness of any prior screening if based on hindsight, new information, use of developing technology or analytical techniques, or similar factors. (Section 4.5.4)

This report was prepared pursuant to an agreement between Public Building Commission (PBC) of Chicago and AECOM and is for the exclusive use of the Client. No other party is entitled to rely on the conclusions, observations, specifications, or data contained herein without first obtaining AECOM's written consent and provided any such party signs an AECOM-generated Reliance Letter. A third party's

signing of the AECOM Reliance Letter and AECOM's written consent are conditions precedent to any additional use or reliance on this report.

The passage of time may result in changes in technology, economic conditions, site variations, or regulatory provisions, which would render the report inaccurate. Reliance on this report after the date of issuance as an accurate representation of current site conditions shall be at the user's sole risk.

1.4 Site-Related Limiting Conditions

The following site-specific limitations were encountered during the course of this assessment:

- It was not feasible to evaluate every individual room or space within the buildings during the site visit. AECOM's evaluation of the buildings focused on areas where hazardous substances are handled. Based on the use of the subject property (elementary school), this particular site-related limiting condition is not expected to have a significant limitation to this assessment.
- During the site visit, AECOM did not access the roofs of the subject property buildings. AECOM's evaluation of the subject property focused on areas where hazardous substances are handled. The site contact did not report any hazardous materials associated with the roofs. Based on this information, this particular site-related limiting condition is not expected to have a significant limitation to this assessment.

1.5 Data Gaps/Data Failure

The following data failure/data gaps were encountered during the course of this assessment:

- As specified in the agreed upon scope of work, a title search and environmental lien search were not conducted as part of this ESA. However, based upon historical data collected from other sources, this data gap is not expected to impact the results of this assessment.
- As of the date of this report, a response from the Illinois Environmental Protection Agency (IEPA) to AECOM's Freedom of Information Act (FOIA) request has not been received. Based on AECOM's research to date, AECOM does not anticipate the response (if any) from the IEPA to our FOIA request will significantly alter the conclusions or recommendations of this report. However, if information is received from this FOIA request that significantly impacts the conclusions of this report, this information will be forwarded upon receipt.
- Per ASTM, past owners, operators, and occupants of the subject property who are likely to have material information regarding the potential for contamination at the subject property shall be contacted to the extent that they can be identified and that the information likely to be obtained is not duplicative of information already obtained from other sources. AECOM was unable to interview past owners and/or operators at the subject property. However, based upon historical data collected from other sources, this data gap is not expected to impact the results of this assessment.
- Per the agreed scope-of-work and the ASTM Standard, information related to certain site-specific items should be provided by the ESA report user to AECOM. To assist the user in gathering information that may be material to identifying RECs, AECOM provided the Client (the users) with the User Questionnaire from the ASTM Standard; at this time the completed form has not been returned for inclusion in this report. However, this data gap is not expected to represent a significant limitation to this investigation given the historical use of the subject property.

2. Site Description

2.1 Site Location and Parcel Description

The subject property is located at 5051 North Kenneth Avenue, Chicago, Cook County, Illinois. The subject property is situated north of West Argyle Street; east of North Kenneth Avenue; south of West Carmen Avenue; and west of North Kostner Avenue. The subject property is accessed from North Kostner Avenue (eastern property boundary).

According to the Cook County Assessor's Office, the subject property consists of two contiguous parcels of land that are designated by the county as Parcel Numbers 13-10-320-001-0000 and 13-10-320-002-0000. The approximate location of the subject property is illustrated on Figure 1 - Site Location Map.

2.2 Site Ownership

According to the Cook County Assessor's Records, the subject property is owned by Chicago Public Schools.

2.3 Site Visit

Mr. Eric Thomas with AECOM's Warrenville, Illinois office visited the subject property on October 25, 2018. During the site visit, Mr. Thomas was accompanied through the building by Mr. Matt O'Boyle, Aramark Building Engineer. Mr. O'Boyle provided information on the current operations and history of the subject property. Mr. O'Boyle has been associated with the subject property since 2017. Site-related limiting conditions encountered during this assessment were previously summarized in Section 1.4.

The site visit methodology consisted of walking over accessible areas of the subject property, including building interiors and exteriors, the perimeter, and the portions of the surrounding area. The following sections summarize the results of the site visit.

2.3.1 Site and Facility Description

The subject property is currently occupied by John M. Palmer Elementary School. The Main Building, Annex Building, and Modular Building are all utilized by the school for educational purposes.

The approximately 4.28-acre (186,436 square-foot) subject property is occupied by a two-story, approximately 85,000 square-foot Main Building with a basement (built in 1925), a single-story approximately 10,000 square-foot Heating Plant Building with an underground tunnel that connects to the Main Building's basement (built in 1925), a single-story approximately 10,000 square-foot Annex Building (built in the 1990s), and a single-story approximately 10,000 square-foot Modular Building (built in the 1990s). Additionally, four storage units are present at the subject property (one contains miscellaneous storage for Palmer Elementary and the other three are construction contractor storage).

The subject property buildings are constructed with concrete block and brick-sided exterior walls. The Annex and Modular Buildings have poured concrete foundations and the Main and Heating Plant Buildings have concrete basements and are connected by an underground tunnel. The site contact was unaware of the construction of the current roofing materials for the subject property buildings. The interior of the Main, Annex, and Modular Buildings generally consist of carpet and tile floors; drywall, concrete block, and exposed brick walls; drywall/drop ceilings; and incandescent and fluorescent lighting. The interior of the Heating Plant Building, Main Building basement, and underground tunnel consist of concrete floors, concrete block walls, drop ceilings, and incandescent and fluorescent lighting.

During the site visit, no visual evidence of potable water wells, monitoring wells, dry wells, clarifiers, septic tanks, or leach fields was observed on the subject property. No visual evidence of discolored soil, water, or unusual vegetative conditions or odors was observed during the site visit. In addition, no visual evidence of significant corrosion was observed on the floors or walls of the subject property building or on

the exterior of the subject property. AECOM observed de minimis oil staining on the concrete extending approximately two to three inches outward from an electrical transformer located to the east of the Heating Plant Building. This pad-mounted transformer contained a non-PCB sticker. AECOM observed standing water in the Heating Plant Building in two different areas. The site contact stated that due to the age of the Heating Plant Building (constructed in 1925) during heavy rain events the basement floods. No sheen was observed on the standing water at the time of AECOM's site visit. The general layout of the subject property is illustrated on Figure 2 - Site Plan and Representative Site Photographs are provided in Appendix A.

2.3.2 Surrounding Properties

The subject property is located in a residential area within the City of Chicago. The subject property is bordered to the north by West Carmen Avenue, beyond which are residential properties. The subject property is bordered to the east by North Kostner Avenue, beyond which are residential properties. The subject property is bordered to the south by West Argyle Street, beyond which are residential properties. The subject property is bordered to the west by North Kenneth Avenue, beyond which are residential properties.

AECOM did not observe any gasoline service stations or dry cleaners in the immediate vicinity (500 feet) of the subject property. In addition, no sensitive receptors (i.e., hospitals, water bodies) are located adjacent to the subject property. Based on AECOM's site reconnaissance of the surrounding neighborhood, no off-site sources of concern were identified.

2.3.3 Petroleum Products and Hazardous Materials

Other than normal commercial cleaning supplies, hazardous materials or petroleum products were not observed at the subject property, and none were reported by the site contact to be located at the subject property, except for several containers that included floor wax, floor stripper, and steam boiler treatment (GWT1910 Sodium Hydroxide/Nitrite Solution) located in the Heating Plant Building. AECOM observed one 55-gallon drum in the former coal storage area of the Heating Plant Building. The site contact was unaware of the contents of the drum. Staining or visual evidence of a hazardous materials release was not observed at the time of the site visit and the boiler chemical containers and 55-gallon drum appeared to be in good condition.

2.3.4 Polychlorinated Biphenyls

Polychlorinated biphenyls (PCB)-containing dielectric fluids have been widely used as coolants and lubricants in transformers, capacitors, and other electric equipment due to their insulating and nonflammable properties. Based on the age of the subject property (pre-1979), the potential exists for PCBs to be present on-site.

Two pad-mounted transformers were observed on the subject property. One pad-mounted transformer is located to the east of the Heating Plant Building and was labeled non-PCB containing. De minimis oil staining, extending approximately two to three inches outward from the transformer, was observed on the concrete around the base of the transformer. The other pad-mounted transformer was located along the eastern perimeter of the Annex Building. This pad-mounted transformer did not contain a non-PCB sticker. No staining was observed around this pad-mounted transformer.

No additional hydraulic equipment (transformers, trash compactors, lifts, elevators) was observed on the subject property.

2.3.5 Aboveground Storage Tanks

One building-owned emergency generator is utilized at the subject property and located east adjacent to the Heating Plant Building. The emergency generator is fueled by an approximately 132-gallon diesel fuel AST contained within the base of the unit. No evidence of leaks or staining was observed in the

vicinity of the generator or associated AST. This AST was listed in the Environmental Data Resources (EDR) database report as being installed on March 6, 2007. No additional ASTs were observed at the subject property or reported by the site contact to be present on-site.

2.3.6 Underground Storage Tanks

Visual evidence of underground storage tanks (USTs) (e.g., vent pipes, fill ports) was not observed during the site visit. Mr. O'Boyle indicated that no USTs are located on the subject property. In addition, the subject property was not listed on any UST databases within the EDR database report or the Office of the Illinois State Fire Marshal (OSFM) UST database.

2.3.7 Solid Waste

AECOM observed two general refuse dumpsters and one recycling dumpster within the dumpster enclosure located to the north of the Heating Plant Building. According to Mr. O'Boyle, Lakeshore Waste Services removes solid waste (twice per week) and recycling (once per week) from the subject property. No evidence of inappropriate disposal activities and no staining were observed in the vicinity of the solid waste and recycling dumpsters.

AECOM observed a trash/waste incinerator within the Heating Plant Building. According to the site contact, the subject property utilized the waste incinerator to dispose of municipal waste from at least 1925 until approximately 2000.

2.3.8 Hazardous Waste

No evidence of hazardous waste generation was observed at the subject property, and the site contact reported no such activities. According to the EDR database report, the subject property was listed as a small quantity generator of hazardous waste on July 14, 1998. The hazardous waste generated included cadmium, lead, and mercury wastes with no violations found.

2.3.9 Water

The facility receives its potable water supply from the City of Chicago water system. No potable water wells were observed at the subject property or reported by the site contact to be present on-site.

2.3.10 Wastewater

Wastewater discharges at the subject property include effluent from human consumptive use and floor drains located in the restrooms and Annex Building mechanical room which, according to the site contact, discharge directly to the municipal combined storm and sanitary sewer system. The site contact also stated that there is an ejector pump in the boiler room that takes all the water to the city lines. Additionally, two sumps are located within the Heating Plant Building. Staining or visual evidence of a hazardous materials release was not observed in the vicinity of the floor drains or sumps.

2.3.11 Stormwater

Stormwater from the subject property appears to infiltrate the unpaved portions and drain via sheet flow across the paved portions of the subject property to combined storm/sanitary drains located throughout the paved areas. The subject property is connected to the municipal combined storm and sanitary water sewer system operated by the Metropolitan Water Reclamation District of Greater Chicago (MWRD). No staining was observed in the vicinity of the storm drains.

2.3.12 Heating and Cooling

The subject property Main Building is heated and cooled by two boilers and four fans through a heat exchange mixing tunnel located within the basement of the Main Building. The Annex Building and

Modular Building are heated and cooled by individual natural gas powered heating, ventilation and air conditioning (HVAC) units. ComEd provides electricity and Peoples Gas supplies natural gas service for heating to the subject property. According to the site contact, the subject property was originally heated by coal within the Heating Plant Building from at least 1925 until approximately 1995.

3. Environmental Setting

3.1 Topography

According to the United States Geological Survey (USGS) topographic map of the subject property area (Chicago Loop, Illinois quadrangle) and a review of the Google Earth application, the elevation of the subject property is approximately 610 feet above mean sea level (msl). Based on a review of these technical resources and AECOM's site visit, the subject property appears to be generally flat.

3.2 Soil/Geology

Site-specific geologic information was not identified during the course of this assessment. According to the environmental database report, the subject property is underlain by Urban Land. These soils are described as variable soils down to depth of approximately 60 inches.

According to geologic information provided in the environmental database report, the bedrock geology of the subject property is of the Paleozoic era, Silurian system, Middle Silurian (Niagoaran) series.

3.3 Groundwater/Hydrology

Site-specific hydrologic information was not identified during the course of this assessment. Based on the surface topography, the groundwater flow direction at the subject property is expected to be to the north towards the North Branch of the Chicago River. It should be noted that the actual depth and flow direction of groundwater beneath the subject property cannot be determined without site-specific groundwater monitoring well data.

4. Site and Area History

Historical information for the subject property and surrounding properties is based on AECOM's review and analysis of the following historical sources:

- Aerial photographs dated 1938, 1951, 1955, 1962, 1972, 1978, 1984, 1988, 1994, 1999, 2007, 2011, 2014, and 2017;
- Topographic maps dated 1889, 1891, 1900, 1901, 1928, 1929, 1953, 1963, 1972, 1978, 1993, 1997, and 2012;
- City directories for the years 1923, 1928, 1931, 1932, 1941, 1947, 1949, 1951, 1957, 1961, 1966, 1971, 1976, 1981, 1986, 1999, 2005, 2010, and 2014; and
- Sanborn® Fire Insurance Maps dated 1924, 1940, 1951, 1975, 1987, 1988, 1993, 2002, and 2004.

In addition, an interview was conducted with Mr. O'Boyle who has been associated with the subject property since 2017.

4.1 Subject Property

AECOM's historical research indicates that the subject property was vacant land from by least 1889 through at least 1901 according to topographic maps. The 1924 Sanborn Map depicts the subject property as developed with six residences located along the eastern subject property boundary. According to the site contact, assessor's records and Sanborn Maps, the present-day Main Building and Heating Plant Building were constructed in 1925. This is consistent with the 1928/29 topographic maps, which depicts these buildings on the northern portion of the subject property. The 1940 through 1993 Sanborn Maps depict the subject property to be occupied by the "John M. Palmer Public School" with the Main Building on the northwestern portion of the property and an underground tunnel leading to the smaller Heating Plant Building to the east. The Heating Plan Building is divided into multiple segments with the top segment labeled as "Coal," the bottom segment labeled as "Heating Plant," and a small central segment labeled "Scales." By the time of the 2002 Sanborn Map, a playground is depicted on the southwestern portion of the property and the present-day Annex Building is depicted on the southeastern portion of the subject property. By the time of the 2004 Sanborn Map, the present-day Modular Building is depicted on the southwestern portion of the property. The subject property has remained in the same configuration since that time. The subject property has been utilized as an elementary school since approximately 1925 according to the site contact.

The city directories reference the subject property tenant as Palmer John M. School and Board of Education City of Chicago for the years 1971, 1976, 1981, 1986, 1999, 2005, 2010, and 2014. Historic on-site concerns related to the Heating Plant Building were identified and discussed in Sections 2.3.7 and 2.3.12.

4.2 Off-site Properties

The 1889 topographic map depicts the subject property to be surrounded by vacant land. By 1900, a roadway is depicted adjacent to the west. The 1924 Sanborn Map depicts the surrounding properties to consist of Carmen Avenue, beyond which is vacant land to the north; North Kostner Avenue, beyond which are a mixture of residential properties and vacant lots to the east; West Argyle Street, beyond which are a mixture of residential properties and vacant lots to the south; and North Kenneth Avenue, beyond which are a mixture of residential properties and vacant lots to the west. The 1940 and 1951 Sanborn Maps depict additional residential homes to the north, east, south, and west. By the time of the 1975 Sanborn Map all of the lots to the north, east, south, and west are filled in with residential homes and the surrounding area is depicted in its current configuration. No historical off-site sources of concern were identified.

4.3 Previously Prepared Environmental Reports

AECOM inquired about existing environmental reports associated with the subject property. Previously prepared environmental reports were not identified during this assessment. Mr. O'Boyle indicated that to his knowledge, there were no previous environmental assessments or reports associated with the subject property.

5. Database and Records Review

5.1 User Provided Information

Section 6 of the ASTM Standard states that certain tasks, which will help to determine the possibility of RECs associated with the subject property, are generally conducted by the ESA report user. This includes the following: reviewing title records for environmental liens or activity and land use limitations and considering awareness of any specialized knowledge (e.g., information about previous ownership or environmental litigation), experience related to RECs at the subject property, or significant reduction in the purchase price of the subject property. Per the agreed scope-of-work, information related to these items should be provided by the ESA report user to AECOM. To assist the user in gathering information that may be material to identifying RECs, AECOM has provided the Client (the users) with the User Questionnaire from the ASTM Standard; however, at this time the completed form has not been returned for inclusion in this report. This data gap is not expected to represent a significant limitation to this investigation based on other documentation reviewed as part of the Phase I ESA.

5.2 Title Records/Environmental Liens

Per the agreed upon scope of work, a chain-of-title and an environmental lien search were not performed as part of this assessment.

5.3 Database Information

In accordance with the scope of work and ASTM Standard E-1527-13, a search of various governmental databases was conducted by EDR. The site-specific environmental database report was reviewed to evaluate if soil and or groundwater from an on-site and/or off-site sources of concern has the potential to impact the subject property. The database abbreviations are provided in the site-specific environmental database report.

The database report includes various reports detailing database information for each of the sites identified/geocoded within the specified radius. In some cases, additional sites are identified within the database report; however EDR is not able to map them to specific locations due to insufficient/contradicting address information. These sites are included in the database report as "orphan" sites. Based upon AECOM's review, no orphan sites were identified. A summary of AECOM's review and analysis of the site-specific environmental database report is presented below. A copy of the database report is provided in Appendix B.

Based on AECOM's research, the subject property is not located on or within a 1-mile radius of tribal lands.

5.3.1 Subject Property

The subject property is identified on the Facility Index System (FINDS), Enforcement and Compliance History Online (ECHO), Resource Conservation and Recovery Act-Small Quantity Generator (RCRA-SQG), Aerometric Information Retrieval System (AIRS), Bureau of Land (BOL), Chicago Environment (IL CHICAGO ENV), and Chicago Department of Public Health Tank Asset Database (TANKS) environmental databases reviewed for this assessment. The FINDS, ECHO, RCRA, AIRS, and BOL database listings are compliance-related listings and are not considered a significant concern.

The FINDS and ECHO database listings refer to the Registry ID: 110001851390 with no other pertinent information listed. The AIRS database listing refers to the Facility ID: 3630 and the Cease Operation Date: August 27, 1998 with no other pertinent information listed. The BOL database listing refers to the Site ID: 170000052779 with no other pertinent information listed.

The RCRA-SQG database listing refers to the July 14, 1998 classification of the subject property as a small quantity generator of cadmium, lead, and mercury hazardous wastes with no violations found. The IL CHICAGO ENV database includes data from the Chicago Department of Public Health (CDPH) environmental records. This listing references the site address with no other pertinent information listed. The TANKS database listing refers to one 132-gallon diesel AST that was installed on March 6, 2007 outside the school's boiler room and is electrically grounded to the generator. The listing also states that the diesel AST vents to the outside air. These database listings are not considered to represent a REC.

5.3.2 Surrounding Sites

According to the environmental database report, numerous sites (over 80) were identified within their respective ASTM and/or EDR search distances from the subject property. Based on AECOM's review of these database listings, none of these sites are expected to present a REC to the subject property based on their distance from the subject property, regulatory status (i.e. closed, no violations found), media impacted (i.e. soil only), and/or topographical position from the subject property (i.e. down-gradient or cross-gradient). Due to their proximity to the subject property, the following sites are discussed in additional detail.

- Raybon Lee Jr. at 4401 West Carmen Avenue is listed on the EDR Historic Auto database as located northeast adjacent to the subject property. This site is listed on the EDR Historic Auto environmental database for the years 2004-2007 as a gasoline service station. However, based on a review of historic aerial photographs and Sanborn Maps, this address listing appears to be incorrect as surrounding properties are depicted as residential, both historically and during this time frame. Due to the incorrect mapping location, it is AECOM's opinion that this site is not a REC.
- 4 Low Gas Mart Inc. at 5053 North Lowell Avenue is listed on the EDR Historic Auto database as located approximately 440 feet east of the subject property. This site is listed on the EDR Historic Auto environmental database for the years 1998-1999 as a gasoline service station. However, based on a review of historic aerial photographs and Sanborn Maps, this address listing appears to be incorrect as surrounding properties are depicted as residential, both historically and during this time frame. Due to the incorrect mapping location, it is AECOM's opinion that this site is not a REC.
- Kenneth Avenue Mercury Spill at 4923 North Kenneth Avenue is located approximately 450 feet south and presumed upgradient of the subject property. This site is listed on the Superfund Enterprise Management System Archive List (SEMS-ARCHIVE) and Resource Conservation and Recovery Act Non-Generator/No Longer Regulated (RCRA NonGen/NLR) environmental databases. The SEMS-ARCHIVE and RCRA NonGen/NLR database listings refer to a residential mercury spill with the Non NPL Status: Removal Only Site (No Site Assessment Work Needed). Due to regulatory status and the lack of impacts associated with the listings, it is AECOM's opinion that this site is not a REC.
- Elmer Mayer, HISIU LUM, TSIU LUM, and Abandoned Lot at 4452-4456 West Gunnison Street are located approximately 1,000 feet south and presumed upgradient of the subject property. This site is located on the TANKS, UST, and Leaking UST (LUST) environmental databases. The TANKS database listing refers to one 1,000-gallon UST of unknown contents installed on November 26, 1958. No issues or leaks have been reported to be associated with this UST. No documentation regarding the removal of this UST was listed and it is unclear if it is still in service. The UST database listing refers to one 2,000-gallon heating oil UST removed on August 2, 1999. The LUST database listing refers to the Illinois Emergency Management Agency (IEMA) Date: July 29, 1999 with a No Further Remediation (NFR) letter dated October 8, 1999. Due to distance and regulatory status, it is AECOM's opinion that this site is not a REC.

5.4 Vapor Encroachment Screening

AECOM conducted a Tier 1 vapor encroachment screening (VES) as part of this assessment. This screening was conducted in general accordance with the ASTM E2600 *Standard Guide for Vapor*

Encroachment Screening on Property Involved in Real Estate Transactions dated October 2015. The objective of the VES was to determine if a VEC exists or if a VEC does not exist.

5.4.1 Subject Property

No on-site sources of vapor encroachment (e.g. UST, contaminated soil, groundwater plume, etc.) were identified during this assessment. Based on this information, a VEC due to an on-site source does not appear to exist.

5.4.2 Off-site

To conduct the VES of the nearby area, AECOM conducted a detailed review and analysis of the site-specific environmental database report with particular focus on the follow two types of sites:

1. Off-site properties that are impacted by chlorinated volatile organic compounds (VOCs) and/or semi-volatile-organic compounds (SVOCs) and are located within approximately 1,750 feet of the subject property, and
2. Off-site properties that are impacted by petroleum hydrocarbons and are located within approximately 525 feet of the subject property.

The following paragraph summarizes the results of AECOM's VES of the nearby area.

A review of the site-specific environmental database indicates that one chlorinated VOC/SVOC site (Kenneth Avenue Mercury Spill, located 450 feet south, and presumed upgradient) and zero petroleum hydrocarbon impacted sites are located with the above-described radii of the subject property. However, the chlorinated VOC/SVOC site can be ruled out based on regulatory status and the lack of impacts associated with the listings.

5.5 Agency File Review

5.5.1 Local

AECOM submitted a Freedom of Information Act (FOIA) request to the City of Chicago Fire Department to determine if they have files associated with USTs, ASTs, chemical storage, spills, violations, and non-compliance for the subject property. The City of Chicago Fire Department responded with various code violations cited on July 26, 2011 for approved carbon monoxide detectors, repair/maintaining self-closing devices on doors, propping open fire doors, and keeping exit areas clear and unobstructed at all times.

5.5.2 County

AECOM submitted a FOIA request to the Cook County Department of Public Health to determine if they have files associated with USTs, ASTs, chemical storage, spills, violations, and non-compliance for the subject property. The Cook County Department of Public Health responded with no records found.

5.5.3 State

AECOM submitted FOIA requests to the Illinois Environmental Protection Agency (IEPA) and the Illinois Office of the State Fire Marshal (OSFM) to determine if they have files associated with underground storage tanks, above ground storage tanks, chemical storage, spills, violations, and non-compliance for the subject property. The OSFM responded with no records found. As of the date of this report, a response from the IEPA to AECOM's FOIA request has not been received. Based on AECOM's research to date, AECOM does not anticipate the response (if any) from the IEPA to our FOIA request will significantly alter the conclusions or recommendations of this report. However, if information is received from this FOIA request that significantly impacts the conclusions of this report, this information will be forwarded upon receipt.

5.5.4 Federal

AECOM searched the U.S. EPA's Envirofacts and Superfund Enterprise Management System (SEMS) online databases. The SEMS database replaced the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) database which has since been retired. SEMS includes the same data fields and content as CERCLIS. The Envirofacts database retrieves information obtained from 17 national systems, including the CERCLIS, Superfund program (NPL sites), hazardous waste sites, and potential hazardous waste sites. The subject property was not listed on the SEMS database. The subject property was listed on the Envirofacts database as a small quantity generator of cadmium, lead, and mercury hazardous wastes. Additionally, the subject property was listed for minor air emission pollutants.

6. Findings and Opinions

AECOM performed a Phase I ESA of the subject property in conformance with the scope and limitations of ASTM Practice E 1527-13, which meets the requirements of Title 40, Code of Federal Regulations Part 312 and is intended to constitute *all appropriate inquiry* for purposes of the landowner liability protections. Any exceptions to, or deletions from, this practice are described in Section 1.3 through 1.5 of this report.

The following sections summarize the findings and opinions of this Phase I ESA of the subject property.

6.1 Recognized Environmental Conditions

Based on the above-described activities, no RECs were identified in connection with the subject property.

6.2 Controlled Recognized Environmental Conditions

Based on the above-described activities, no CRECs were identified in connection with the subject property.

6.3 Historical Recognized Environmental Conditions

Based on the above-described activities, no HRECs were identified in connection with the subject property.

6.4 De Minimis Conditions

Based on the above-described activities, the following DMC was identified in connection with the subject property:

- AECOM observed de minimis oil staining on the concrete extending approximately two to three inches outward from an electrical transformer located to the east of the Heating Plant Building. This pad-mounted transformer contained a non-PCB sticker.

7. Conclusions

We have performed a Phase I ESA in conformance with the scope and limitations of ASTM Practice E 1527-13 of Palmer Elementary School, 5051 North Kenneth Avenue, Chicago, Illinois, the subject property. Any exception to, or deletions from, this practice are described in Sections 1.3 through 1.5 of this report. This assessment has revealed no evidence of RECs or CRECs in connection with the property.

8. Environmental Professional Statement

Ms. Lynn M. Gieriek was the Environmental Professional (EP) for this project. Ms. Gieriek's EP statement is below and her resume is provided in Appendix C:

I declare that, to the best of our professional knowledge and belief, I meet the definition of an EP as defined in §312.10 of 40 Code of Federal Regulations (CFR) and that I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed all the appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Signature:  Date: November 7, 2018

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status

EXECUTIVE SUMMARY

indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 07/17/2018 has revealed that there is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property.

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 03/01/2018 has revealed that there are 2 CORRACTS sites within approximately 1 mile of the target property.

Federal RCRA generators list

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/01/2018 has revealed that there are 2 RCRA-SQG sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 03/01/2018 has revealed that there are 2 RCRA-CESQG sites within approximately 0.25 miles of the target property.

State and tribal leaking storage tank lists

LUST: The Leaking Underground Storage Tank Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data come from the Illinois Environmental Protection Agency's LUST Incident Report.

A review of the LUST list, as provided by EDR, and dated 07/23/2018 has revealed that there are 18 LUST sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Illinois State Fire Marshal's STC Facility List.

A review of the UST list, as provided by EDR, and dated 07/23/2018 has revealed that there are 7 UST sites within approximately 0.25 miles of the target property.

TANKS: This dataset contains Aboveground Storage Tank (AST) and Underground Storage Tank (UST) information from the Department of Public Health's (CDPH) Tank Asset Database. The Tank Asset Database contains tank information from CDPH AST and UST permit applications as well as UST records imported from the historic Department of Environment (DOE) database. This dataset also includes AST records from the historic DOE and pre-1992 UST records from the Building Department.

A review of the TANKS list, as provided by EDR, and dated 09/12/2018 has revealed that there are 37 TANKS sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/01/2018 has revealed that

EXECUTIVE SUMMARY

there are 3 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

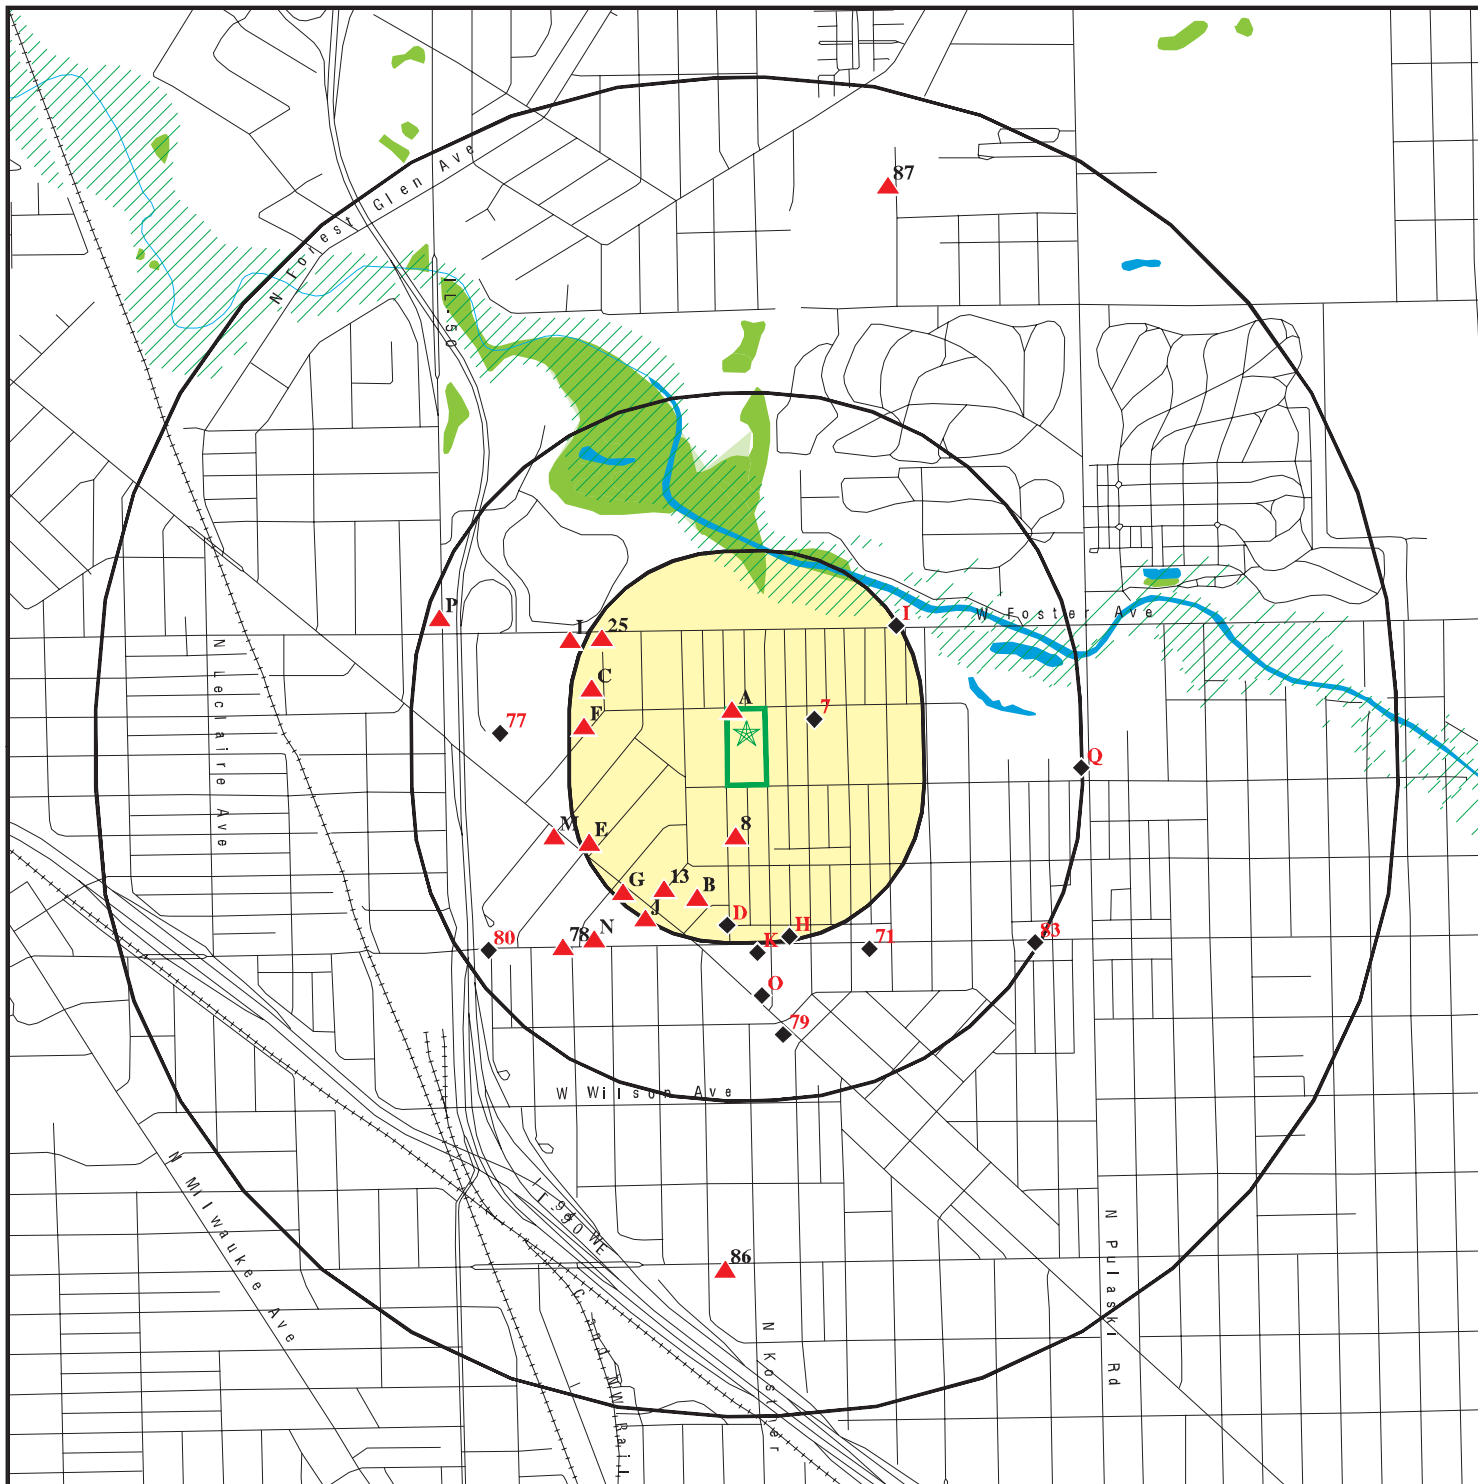

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 2 EDR Hist Auto sites within approximately 0.125 miles of the target property.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

ACES (Illinois - Agency Compliance And Enforcement System) is the Illinois EPA Project to facilitate the permitting operations

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: U239
. Waste name: BENZENE, DIMETHYL- (I,T)

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

Illinois EPA Project to facilitate the permitting operations

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

ACES (Illinois - Agency Compliance And Enforcement System) is the Illinois EPA Project to facilitate the permitting operations

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

ACES (Illinois - Agency Compliance And Enforcement System) is the Illinois EPA Project to facilitate the permitting operations

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

ACES (Illinois - Agency Compliance And Enforcement System) is the Illinois EPA Project to facilitate the permitting operations

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

. Waste code: D001

. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 07/17/2018	Source: EPA
Date Data Arrived at EDR: 08/09/2018	Telephone: N/A
Date Made Active in Reports: 09/07/2018	Last EDR Contact: 10/04/2018

	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Data Release Frequency: Quarterly

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 03/01/2018	Source: Environmental Protection Agency

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 03/01/2018	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/28/2018	Telephone: 312-886-6186

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

LF SPECIAL WASTE: Special Waste Site List

These landfills, as of January 1, 1990, accept non-hazardous special waste pursuant to the Illinois EPA Non-Hazardous Special Waste Definition. List A includes landfills that may receive any non-hazardous waste, Non-Regional Pollution Control Facilities are so noted. List B includes landfills designed to receive specific non-hazardous wastes. List B landfills are designated as a Regional Pollution Control Facility by RPCF, or Non-Regional Pollution Control Facility by Non-RPCF.

LUST TRUST: Underground Storage Tank Fund Payment Priority List

In case sufficient funds are not available in the Underground Storage Tank Fund, requests for payment are entered on the Payment Priority List by "queue date" order. As required by the Environmental Protection Act, the queue date is the date that a complete request for partial or final payment was received by the Agency. The queue date is "officially" confirmed at the end of the payment review process when a Final Decision Letter is sent to the site owner.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

LIENS 2: CERCLA Lien Information

A Federal CERCLA ('Superfund') lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. These monies are spent to investigate and address releases and threatened releases of contamination. CERCLIS provides information as to the identity of these sites and properties.

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HWAR: Hazard Waste Annual Report

Each year, Illinois hazardous-waste generators tell the Illinois EPA the amounts and kinds of hazardous waste they produced during the previous year. Generators indicate by code the types of wastes produced and the steps they took to manage these wastes. If some or all of these wastes were sent to commercial treatment, storage, and disposal facilities (TSDFs), that information and the identity of each receiving facility also are submitted. Illinois TSDFs likewise report the types and quantities of wastes received from in-state and out-of-state generators; they also report the procedures they used to manage these wastes.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

UIC: Underground Injection Wells

Injection wells are used for disposal of fluids by "injection" into the subsurface. The construction of injection wells range from very technical designs with twenty-four hour monitoring to simply a hole dug in the ground to control runoff. As a result of this diversity, the UIC Program divides injection wells into five different classes.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.
Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General North

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

--	---

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data:*

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era: Paleozoic
System: Silurian
Series: Middle Silurian (Niagoaran)
Code: S2 *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBANLAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Bedrock Max: > 0 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	60 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
fine sandy loam
loam
fine sand

Surficial Soil Types: silt loam
fine sandy loam
loam
fine sand

Shallow Soil Types: sandy loam

Deeper Soil Types: silt loam
sand
loamy sand
loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

Appendix C - Qualifications of Environmental Professional

Lynn M. Gierek

Senior Scientist/Project Manager

Professional History

Education

MA, Anthropology, University of Illinois at Chicago

BA, Anthropology, University of Illinois at Chicago

Years of Experience

With AECOM 13

With other firms 19

Training and Certifications

40-hour OSHA HAZWOPER Training

8-hour OSHA HAZWOPER Refresher Training

Certified and Licensed Asbestos Building Inspector, Illinois

Certified and Licensed Asbestos Building Inspector, Indiana

Certified and Licensed Asbestos Building Inspector, Iowa

Certified and Licensed Lead Risk Assessor, Illinois

National Historic Preservation Act/Section 106

Environmental Auditor Training

Registered Professional Archaeologist

Technical Specialties

Transactional Due Diligence Environmental Impact

Assessment & Statements

Federal, State, & Local Regulatory Interface & Negotiation

Asbestos Building Inspections and Surveys

Lead-based Paint Building Inspections and Surveys

Archaeology/Cultural Resources Studies

Lynn Gierek is a senior member of and a regional coordinator for AECOM's environmental due diligence practice. She has managed and performed over 1,200 Environmental Site Assessment (ESA)/transactional due diligence assessments throughout the United States for over 20 years. Lynn has conducted due diligence assessments on a wide variety of property types, ranging from undeveloped land and agricultural properties to residential, commercial, commercial retail complexes, and industrial facilities, including railroad properties, manufacturing, and long-term health care facilities and hospitals. As part of many of these assessments, Lynn has also performed compliance reviews, limited audits, and asbestos and lead-based paint survey and sampling programs. Lynn has a 40-Hour OSHA certification. Lynn has served as a senior reviewer and project manager for numerous environmental due diligence projects in the United States and internationally, including various projects in Europe, Asia, Australia, and South America.

Lynn is licensed to conduct asbestos building inspections in Illinois, Indiana and Iowa and lead building inspections in Illinois. Lynn has performed numerous asbestos and lead-based paint survey projects in these states. Lynn also is an archaeologist and cultural resources specialist in AECOM's Impact Assessment & Permitting Practice, where she conducts cultural resources and historical evaluations, with over 28 years of experience in cultural resources projects.

Experience

Numerous Confidential Clients, Environmental Due Diligence Phase I

Environmental Site Assessments, United States. Performed and managed over 1,200 Phase I Environmental Site Assessments and Environmental Transaction Screens throughout the United States on various industrial, commercial, residential, agricultural, and railroad properties. As part of many of these assessments, Lynn has also performed compliance reviews, limited audits, and asbestos and lead-based paint survey and sampling programs. Lynn has assisted in managing large scale portfolios with United States and international sites.

O'Hare Modernization Project, O'Hare Airport, Chicago, Cook County, Illinois; Asbestos and Lead-Based Paint (LBP) and Surveys and Inspections.

Perform numerous asbestos surveys and inspections and lead-based paint (LBP) surveys and inspections at O'Hare Airport on various types of buildings and structures, including airport terminals, airport maintenance facilities, and airport transit station facilities. Inspections include survey, sampling, and report preparation. Surveys are performed for pre-demolition and renovation under National Emission Standards for Hazardous Air Pollutants (NESHAPS) and applicable state and local regulations.

Chicago Department of Transportation (CDOT), Wells Street Bridge House Project, Asbestos and Lead-Based Paint Surveys of the North and South Wells Street Bridge Houses in Chicago, Cook County, Illinois. Performed LBP and asbestos surveys at the North and South Wells Street Bridge Houses as a precursor to renovation/demolition, including survey, sampling, and report preparation.

Cook County Highway Department, Lead-Based Paint Survey, La Grange Park, Cook County, Illinois. Performed LBP survey and inspection of Garage/Storage Building, including survey, sampling, and report preparation.

Illinois Department of Transportation, Chicago Transit Authority (CTA), Circle Interchange Project, Chicago, Cook County, Illinois. Performed LBP survey at the Peoria Street Blue Line CTA Station as a precursor to renovation/demolition, including survey, sampling, and report preparation.

United States Coast Guard (USCG), Wilmette Harbor Station, Bulkhead Replacement Project, Wilmette, Cook County, Illinois. Performed LBP survey at the USCG Wilmette Harbor Station as a precursor to renovation/demolition and bulkhead replacement, including survey, sampling, and report preparation.

Numerous Confidential Commercial Clients, Asbestos Building Inspections, Illinois, Indiana, and Iowa. Performed over 150 Asbestos Building Inspections in Illinois on various commercial, residential, and industrial properties, including pre-demolition and renovation National Emission Standards for Hazardous Air Pollutants (NESHAPS) surveys. Inspections include survey, sampling, and report preparation. Also performed limited sampling in other Midwestern States.

Numerous Confidential Clients, Lead-Based Paint (LBP) Building Inspections, Illinois. Performed over 70 LBP Building Inspections in Illinois on various commercial, residential, and industrial properties. Inspections include survey, sampling, and report preparation. Also performed limited sampling in other Midwestern States.

Confidential Client, Environmental Audit, Building Restoration (Fire/Water Damage) Services, Colorado. Performed an annual environmental audit for a building restoration (fire/water damage) services company at their facility and on job sites in the Denver, Colorado area, including conducting on-site inspections, interviews, document reviews, and attending opening and closing briefings with the facility staff.

Confidential Client, Environmental, Safety, & Health (ES&H) Audits, Automotive Parts Manufacturing Facilities, Michigan. Performed ES&H audits for an automotive parts manufacturer at two of their facilities in Michigan, including conducting on-site inspections, interviews, document reviews, and attending opening and closing briefings with the facility staff.

Cultural Resources Assessments, Various Confidential Clients, United States. Managed cultural resources assessments for clients prior to construction and pursuant to the National Historic Preservation Act, as Amended (Section 106) and applicable state laws and regulations. Responsibilities include field work, research, overall project management, SHPO and tribal consultations, management of cultural resources subcontractors, data evaluation, and report preparation.
